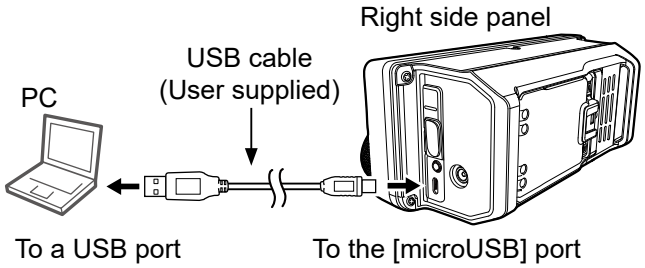
Remote control (CI-V) information

◇CI-V connection

The transceiver's operating frequency, mode, VFO and memory selection, can be remotely controlled using a PC.
The Icom Communications Interface V (CI-V) controls the transceiver.
Connect the transceiver to a PC with a USB cable (User supplied).

ⓘMake the connection as short as possible. The transceiver may not be recognized by the controller, depending on the USB cable length.

ⓘWhen connecting to a USB port on your PC with the USB driver installed, USB (A) and USB (B) are named as "IC-705 Serial Port A (CI-V)" and "IC-705 Serial Port B."



To use the USB cable between the transceiver and a PC, you must first install a USB driver.
The latest USB driver and installation guide can be downloaded from the Icom website.

Carefully read the guide, before installing the driver.

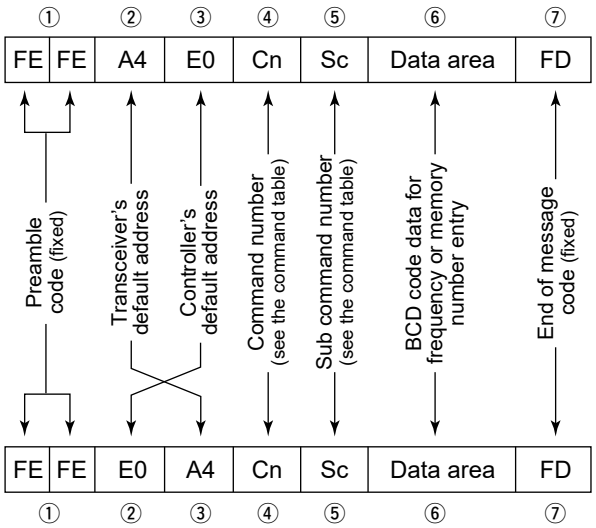
◇Preparing

The Icom Communications Interface V (CI-V) is used for remote control.
To control the transceiver, first set its address, data communication speed, and transceive function.
These settings are set in the Set mode (Refer to the IC-705 instruction manual).

◇About the data format

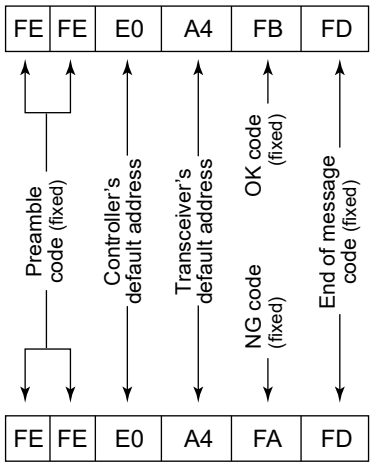
The CI-V system can be written using the following data formats. Data formats differ according to command numbers. A data area or sub command is added for some commands.

Controller to IC-705



IC-705 to controller

OK message to controller



NG message to controller

◇ Command formats

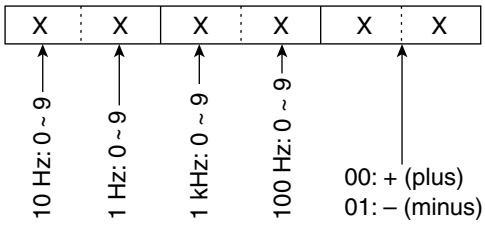
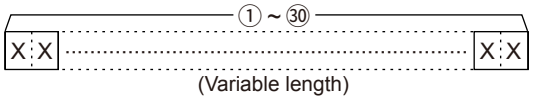
• RIT frequency settings

Command: 21 00



• DV TX data

Command: 22 00



① ~ ㉚: TX data (Up to 30 Byte)

ⓘ"FA" to "FF" are entered after converted to "FF 0A" to "FF 0F" automatically. Up to 60 Byte data can be entered in this case.

• DV RX data (transceive)

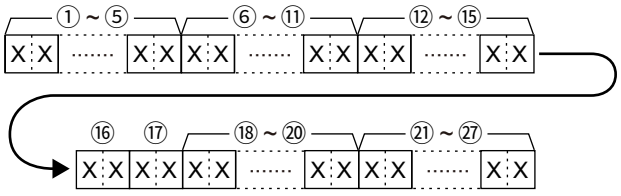
Command: 22 0101

① ~ ㉚: RX data (Up to 30 Byte)

ⓘ"FA" to "FF" are entered after converted to "FF 0A" to "FF 0F" automatically. Up to 60 Byte data can be entered in this case.

• MY position data

Command: 23 00



① ~ ⑤: Latitude (dd°mm.mmm format)
⑥ ~ ⑪: Longitude (ddd°mm.mmm format)
⑫ ~ ⑮: Altitude (0.1 meter steps)
⑯, ⑰: Course (1 degree steps)
⑱ ~ ⑳: Speed (0.1 km/h steps)

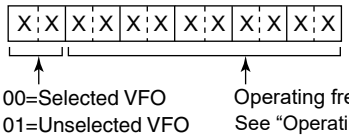
(y: Year, m: Month, d: Day,
H: Hour, M: Minute, S: Second)

• Selected or unselected VFO frequency settings

Command: 25



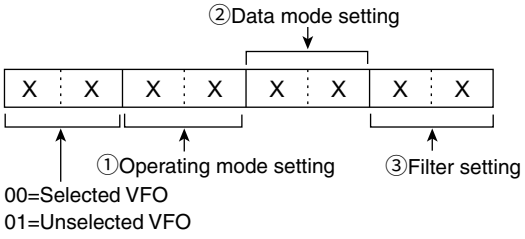
ⓘWhen using the DR function, the transceiver returns "FA" (NG) because these cannot be set to 01.

- When VFO A is selected
  00=frequency of VFO A changes
  01=frequency of VFO B changes
- When VFO B is selected
  00=frequency of VFO B changes
  01=frequency of VFO A changes

• Selected or unselected VFO's operating mode and filter settings

Command: 26

Both data and filter settings can be skipped.
In that case, "DATA OFF" and the default filter setting of the operating mode is automatically selected.



ⓘWhen using the DR function, the transceiver returns "FA" (NG) because these cannot be set to 01.

- When VFO A is selected
  00 = operating mode of VFO A changes
  01 = operating mode of VFO B changes
- When VFO B is selected
  00 = operating mode of VFO B changes
  01 = operating mode of VFO A changes

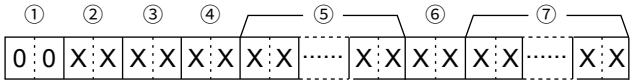
Remote control (CI-V) information

◇ Command formats

• **Scope waveform data**

Command: 27 00

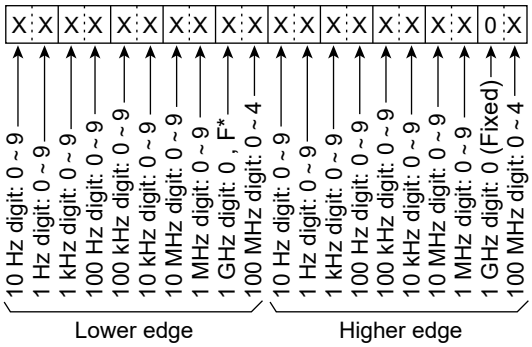
Outputs the waveform data to the controller.



①: 00 (Fixed)
②: Order of division data (Current): 01~11
③: Division number (Maximum): 01(WLAN), 11(USB)
ⓘWhen data is sent to the controller using the WLAN function, all data is sent together. However, when the data is sent through the [microUSB] port, the data is divided by 11 and sent in sequential order.
ⓘThe 1st data sends only the wave information (① ~ ⑥) without the waveform data (⑦). The 2nd or later data sends the minimum wave information (① ~ ③) with waveform data (⑦).

④: Spectrum scope mode data:
- 00 = Center mode scope
- 01 = Fixed mode scope
- 02 = SCROLL-C mode scope
- 03 = SCROLL-F mode scope

⑤: Waveform information:
The waveform information differs, depending on the Spectrum scope mode.
- In the Center mode:
  Center frequency and span are sent.
  See page 17 for Operating frequency data, and the Scope span settings (② ~ ⑥) on page 29.
- In the Fixed, SCROLL-C, and SCROLL-F modes:
  Lower edge and higher edge frequencies are sent.



* “F” means that the Lower edge frequency is a negative value.

⑥: Out of range information:
- 00 = In range
- 01 = Out of range

ⓘIf the scope data is out of range, the waveform data (⑦) is omitted.

⑦: Waveform data:
The transceiver outputs the drawn waveform data. The data range or data length of the waveform data is judged by the controller. (The data range is basically the same as the display size of the scope on the controller.)
- Data range: 0 ~ 160
- Data length: 475
